

A METHOD AND SYSTEM FOR ASSIGNING A BACKGROUND TO A  
DOCUMENT AND A DOCUMENT HAVING A BACKGROUND  
MADE ACCORDING TO THE METHOD AND SYSTEM

ABSTRACT

5           This invention is concerned with a method and system for indicating selective parameters  
in a document, comprising: defining parameters for affecting the document; defining a function  
which includes the defined parameters as variables; providing a background generator receiving  
the function result as an input, for accordingly outputting a background relative to the input; and  
checking the document and substituting actual values reflecting the parameters to the function  
10   variables, and activating the function to obtain and provide results to the background generator,  
to produce and apply a specific background to the document, and the system produces a  
background to a document, and includes an electronic document with associated parameters;  
parameters retrieving and value generator for examining predefined parameters, and providing  
values to variables of a predefined function; a predefined function including variables, for  
15   producing an output result, which is provided to a background generator; and a background  
generator receiving the function output result, for accordingly applying to the document a  
specific background relative to the function result.
